

**REMARKS/ARGUMENTS**

This is supplemental to the Amendment filed 4 October 2006 in response to the Office Action dated 16 June 2006. Applicant hereby request the Examiner to please add the following remarks to those made in the Amendment of 4 October 2006.

With respect to the Wilson reference, in applying the neurophysiological monitoring system disclosed therein, the user has to keep his hand straight for attachment of the electrodes and stimulation means. Obviously, the user is not able to use that hand to do anything else, such as operating a mouse, when the system of Wilson is being employed. That system is much too complicated for incorporating into a computer mouse and cannot provide the functionality of the present invention.

MR3375-13

Application Serial No. 10/733,329

Response to Office Action dated 16 June 2006 and  
supplemental to the Amendment filed 4 October 2006

It is respectfully reiterated that the subject Patent Application has been placed  
fully in condition for allowance, and such action is respectfully requested.

Respectfully submitted,  
FOR: ROSENBERG KLEIN & LEE
